Sikalastic®-621 TC
(Decothane Top Coat)

Highly durable, UV-stable, versatile and easily applied liquid Roof Waterproofing Top coat

Product Description
Sikalastic®-621 TC is a cold-applied, seamless, highly elastic, UV-stable, one-component, moisture-triggered polyurethane Top Coat (TC) designed to provide easy application and a durable solution as part of the SikaRoof® MTC systems.

Uses
- For exposed and built-up roofs in both new construction and refurbishment projects
- For roofs displaying complex detail areas and geometry, even when accessibility is limited
- For cost efficient life cycle extension of failing roofs
- For reflective coatings to enhance energy efficiency by reducing cooling costs

Characteristics / Advantages
- Proven technology - over 20 years track record
- Easy and quick application with Sika® Reemat and Sikalastic® Applicator
- Fast curing, ability to rapidly become resistant to rain damage
- UV-stable
- Highly elastic and crack-bridging
- Seamless roof waterproofing membrane
- When used with approved primers, will fully bond to most substrates preventing the migration of water
- Vapour permeable
- Strong resistance to common atmospheric chemicals
- Low odour during application
- Long shelf life – 12 months

Tests

Approval / Standards
- European Technical Approval No. ETA-09/0139: SikaRoof® MTC 12, SikaRoof® MTC 15, SikaRoof® MTC 18, SikaRoof® MTC 22, SikaRoof® MTC Cold Bonding
- External fire performance: B_{Roof} (t1)- B_{Roof} (t4) (SikaRoof® MTC 15, non-combustible surfaces)
  - B_{Roof} (t1)- B_{Roof} (t3) (SikaRoof® MTC 18)
  - B_{Roof} (t4) (SikaRoof® MTC 15, SikaRoof® MTC 18)
  - B_{Roof} (t1) (SikaRoof® MTC 22)
- Sikalastic®-621 TC 9016 SR meets Energy Star requirements
Product Data

Form

Appearance / Colours
Standard colours: slate grey, shale grey and white (RAL 9016 SR)
Other colours available upon request

Packaging
5 litre pails (appr. 7.2 kg)
15 litre pails (appr. 21.6 kg)

Storage

Storage Conditions / Shelf Life
12 months from date of production if stored properly in original, unopened and undamaged sealed packaging in dry conditions at temperatures > 0°C and <25°C.

Technical Data

Chemical Base
One-component moisture-triggered Polyurethane

Density
1.44 kg/l
All density values at +23°C (EN ISO 2811-1)

Solid Content
~ 81.3% by volume / ~ 87.4% by weight

Flash Point
62°C

Service temperature
-30 to + 80°C (intermittent)

Solar reflectance
Solar reflectivity CIGS of Siklastic®-621 TC 9016 SR: > 93%*
*Initial solar reflectivity of an airless spray-applied non-weathered free film of Siklastic®-621 TC 9016 SR after 7 days curing at ambient conditions.

Chemical Properties

Chemical Resistance
Strong resistance to a wide range of reagents including paraffin, petrol, fuel oil, white spirit, acid rain, detergents and moderate solutions of acids and alkalis. Some low molecular weight alcohols can soften the material. Contact Technical Service for specific recommendations.
Salt spray to ASTM B117 (1000 hours continuous exposure) and Prohesion testing to ASTM G85 – 94: Annex A5 (1000 hours cyclic exposure).
System Information

Exposed Roofs

To provide a UV-stable coating, to extend life expectancy of old roofs, to provide reflective coatings to enhance energy efficiency or for high-performance waterproofing solutions on new construction and refurbishment projects.

* Initial solar reflectivity measured on top of a free film of the solar reflective top coat, Sikalastic®-621 TC 9016 SR, as part of the SikaRoof® MTC 8 SR, 15 SR, 18 SR and 22 SR (Solar Reflective) systems. For optimum solar reflectivity airless spray-application of topcoat is required.
**Built-up Roofs**

**SikaRoof® MTC Cold Bonding**

Insulated build-up Roof Waterproofing system for new construction and refurbishment projects.

Build up: Sikalastic® Vap, Sikalastic® Insulation and Sikalastic® Carrier adhered with Sikalastic® Coldstick, waterproofed with SikaRoof® MTC12, 15, 18, 22

Substrates: Plywood, concrete, galvanised steel, aluminium, asphalt, bituminous felt (incl. SBS)

Primer: Please refer to Sikalastic® Primer chart below

Dry film thickness: 1.3 to 2.2 mm (BC and TC)

Total consumption: BC: ≥ 1.0 to 1.4 kg/m²

TC: ≥ 1.0 to 2.3 kg/m²

**Professional Detailing**

**SikaRoof® MTC Flashing**

As a flashing kit, can be used with bituminous felt to form a complete waterproofing system.

Build up: Sikalastic®-601 BC applied in 1 coat, reinforced with Sika® Reemat Premium and sealed with 1 coat Sikalastic®-621 TC

Substrates: Bituminous membrane.

Primer: Please refer to Sikalastic® Primer chart below

Dry film thickness: 1.5 to 2.2 mm (BC and TC)

Total consumption: BC: ≥ 1.4 kg/m²

TC: ≥ 1.0 to 1.6 kg/m²

**SikaRoof® MTC Detailing in combination with Sikaplan®/Sarnafil® membranes**

Build up: Sikalastic®-621 TC applied in 1 coat, reinforced with Sika® Reemat Premium and sealed with 1 or 2 coats Sikalastic®-621 TC

Substrates: Sikaplan®/Sarnafil® membranes

Primer: Please refer to Sikalastic® Primer chart below

Dry film thickness: 1.5 to 2.2 mm (TC and TC)

Total consumption: TC: ≥ 1.4 kg/m²

TC: ≥ 1.0 to 1.6 kg/m²

- One component product. Stir before using
- UV resistant and resistant to yellowing
- Low-temperature stability
- Thermal-shock resistant, i.e. will not be damaged by extended or sudden thermal exposure to ice, hail, rain, direct sunlight or rapid thermal swings
- Highly elastic and crack-bridging
- Vapour permeable
- Easy application by brush, roller or airless spray equipment even when accessibility is limited.
### Application Details

**Cementitious substrates**

New concrete should be allowed a minimum of 10 days before priming – ideally 28 days and should have a Pull off strength ≥1.5 N/mm². Inspect the concrete, including upstands, all areas should be hammer tested. Concrete must be suitably finished, preferably by wood float or steel pan. A power float finish is acceptable where the surface is prepared to avoid laitance (a tamped finish is not acceptable). The surface finish must be uniform and free from defects such as laitance, voids or honeycombing.

**Brick and stone**

Mortar joints must be sound and preferably flush pointed.

**Slates, tiles, etc.**

Ensure all slates/tiles are sound and securely fastened, replacing obviously broken or missing sections.

**Asphalt**

Asphalt contains volatiles which can cause bleeding and slight non-detrimental staining. The asphalt must be carefully assessed for moisture and/or air entrapment, grade and surface finish prior to any coating works being carried out.

**Bituminous felt**

Ensure that Bituminous felt is firmly adhered or mechanically fixed to the substrate. Bituminous felt should not contain badly degraded areas.

**Bituminous coatings**

Bituminous coatings should not have sticky or mobile surfaces, volatile mastic coatings, or old coal tar coatings.

**Metals**

Metals must be in sound condition.

**Wooden substrates**

Timber and timber based panel roof decks are to be in good condition, firmly adhered, or mechanically fixed.

**Paints/Coatings**

Ensure the existing material is sound and firmly adhered.

**Existing Siklastic® MTC System**

The existing Siklastic® MTC System should still be soundly adhered to the substrate.
**Substrate Quality**

Cementitious substrates

Cementitious or mineral based substrates must be prepared mechanically using abrasive blast cleaning or scarifying equipment to remove cement laitance and to achieve an open textured surface.

Loose friable material and weak concrete must be completely removed and surface defects such as blowholes and voids must be fully exposed.

Repairs to the substrate, filling of joints, blowholes/voids and surface levelling must be carried out using appropriate products from the Sikafloor®, SikaDur® and SikaGard® range of materials.

High spots must be removed by e.g. grinding.

Outgassing is a naturally occurring phenomenon of concrete that can produce pinholes in subsequently applied coatings. The concrete must be carefully assessed for moisture content, air entrapment, and surface finish prior to any coating work. Any requirement for priming must also be considered. Installing the membrane either when the concrete temperature is falling or stable can reduce outgassing. It is generally beneficial, therefore, to apply the embedment coat in the late afternoon or evening.

**Brick and stone**

Power wash and use Sika® Biowash as required.

**Ceramic tiles**

Tiles need a good adhesion to the substrate otherwise they need to be removed. Power wash and use Sika® Biowash as required.

**Asphalt**

Power wash and use Sika® Biowash as required. All major cracks should be sealed to allow continuity of the SikaRoof MTC system. Asphalt must be carefully assessed for moisture and/ or air entrapment, grade and surface finish prior to any coating works being carried out. Any priming requirement must also be considered.

**Bituminous felt**

Power wash and use Sika® Biowash as required. Treat blisters by star cutting and removing any underlying water. Allow to dry and re-adhere using Sikalastic® Coldstik.

**Bituminous coatings**

Remove any loose or degraded coatings. Apply the Sikalastic® waterproofing membrane directly.

**Metals**

Steelwork is ideally prepared to Sa 21/2 (Swedish Standard SIS 05 : 5900 = 2nd quality BS4232 = S.S.P.C. grade SP10) OR as indicated by the blasting specification which may be of a higher standard. Where blasting is not permitted, clean metal preparation by pin hammer etc is acceptable.

Non-ferrous metals are prepared as follows. Remove any deposits of dust and oxidation and abrade to bright metal. Wire brushing can be used for soft metal such as lead. The surface must be clean and free from grease which, if present, must be removed with a proprietary solution. Wash with detergent, rinse and dry.

**Wooden substrates**

Timber and timber based panel roof decks require a complete layer of Sikalastic® Carrier bonded using Sikalastic® Coldstik prior to the application of the chosen system. The substrate should then be treated as a felt roof. Small timber protrusions may be treated directly, provided that the timber is of exterior quality, e.g. plywood, oil tempered hardboard, etc.

**Paints/Coatings**

Remove any loose or degraded coatings. Ensure the surface is clean and free from grease.

**Sikaplan/Sarnafil membranes**

Clean membranes with Sarna Cleaner (PVC membranes) and Sarnafil T Clean (FPO membranes) prior to application of primer.

**Existing SikaRoof MTC System**

Clean the membrane using a water jet at approximately 140bar (2000 p.s.i) using Sika® Biowash if necessary. Allow to dry.

---

Note: For the Waiting Time /Overcoating you should refer to the PDS of the appropriate cleaner. Other substrates must be tested for their compatibility. If in doubt, apply a test area first.

Note: For the Waiting Time / Overcoating you should refer to the PDS of the appropriate cleaner and primer. Other substrates must be tested for their compatibility. If in doubt, apply a test area first.

### Application Conditions / Limitations

- **Substrate and ambient Temperature**: +5°C min. / +35°C max.
- **Substrate Moisture Content**: < 4% moisture content. No rising moisture according to ASTM (Polyethylene-sheet). No water / moisture / condensation on the substrate.
- **Relative Air Humidity**: 5% min. / 85% max.
- **Dew Point**: Beware of condensation. Surface temperature during application must be at least +3°C above dew point.

### Application Instructions

- **Mixing**: Not required
- **Application Method**: Prior to the application of Sikalastic®-601 BC the substrate must be prepared and the priming coat must have cured tack-free. For the Waiting Time / Overcoating please refer to the PDS of the appropriate primer.

**Exposed Roofs**

- **SikaRoof® MTC 8**: Sikalastic®-621 TC is applied in one or more coats. Prior to the application of a second coat the indicated Waiting Time in the table below should be achieved.
- **SikaRoof® MTC 8 SR (Solar Reflective)**: For optimum solar reflectivity the high reflective coating Sikalastic®-621 TC 9016 SR is airless spray-applied.
- **SikaRoof® MTC 12, 15, 18, 22**: Apply first coat of Sikalastic®-601 BC and roll in the Sika® Reemat whilst wet. Ensure there are no bubbles or creases and that the Reemat overlaps by a minimum of 5cm. Prior to the application of a second and third coat of Sikalastic®-621 TC the indicated Waiting Time in the table below should be achieved.

Please note, always begin with details prior to waterproofing the horizontal surface.
SikaRoof® MTC 15 SR, 18 SR, 22 SR (Solar Reflective): For optimum solar reflectivity the high reflective coating Sikalastic®-621 TC 9016 SR is airless spray-applied in one or two coats on top of Sikalastic®-601 BC.

**Built-up Roofs**

**SikaRoof® MTC Cold Bonding**: Mix the components of the Sikalastic® Coldstick (as instructed in the relevant PDS) and apply to the substrate snaking the adhesive across the deck. For profiled metal decks apply along the crown. Roll the Sikalastic® Vap into the adhesive, sealing side and end laps with a bead of adhesive. The Sikalastic® Insulation is embedded in a similar layer of Sikalastic® Coldstick. The Sikalastic® Carrier is then laid onto the Sikalastic® Insulation and adhered in a similar manner to the vapour control layer. The SikaRoof MTC 12, 15, 18 or 22 is then applied directly over the Sikalastic® Carrier.

**Professional Detailing**

**SikaRoof® MTC Flashing**: Ensure that Bituminous felt is firmly adhered or mechanically fixed. Apply first coat of Sikalastic®-601 BC, and roll in the Sika® Reemat Premium whilst wet. Ensure there are no bubbles or creases and that the Reemat overlaps by a minimum of 5cm. Prior to the application of a second and third coat of Sikalastic®-621 TC the indicated Waiting Time in the table below should be achieved.

**SikaRoof® MTC Detailing**: Ensure that the Sikaplan®, Sarnafil® membranes are firmly adhered or mechanically fixed according to Sika recommendations. Apply first coat of Sikalastic®-621 TC, and roll in the Sika® Reemat Premium whilst wet. Ensure there are no bubbles or creases and that the Reemat overlaps by a minimum of 5cm. Prior to the application of a second and third coat of Sikalastic®-621 TC the indicated Waiting Time in the table below should be achieved.

**Application Tools**

**Jet washer**: If dust, vegetation, moss / algae or other contaminants are present on the existing roof, a power washer is required to clean the substrate prior to the application of SikaRoof Systems. Existing chippings should be removed by hand or scabbling prior to power washing.

**Squeegee**: Useful when removing excess water from the roof after overnight rain

**Drill and paddle**: The two part of Sikalastic® Coldstick should be mixed for two minutes using a drill and paddle. Part B should be poured into part A.

**Pouring Can**: The pouring can is used to snake the Sikalastic® Coldstick across the structural deck, the Sikalastic® Vap, or the Sikalastic® Insulation.

**Scraper**: Required to squeeze the excess Sikalastic® Coldstick from the laps of the Sikalastic® Vap and Sikalastic® Carrier when sealing the side and end laps.

**Medium pile roller**: Used in the application of Sikalastic®-601 BC and Sikalastic®-621 TC to ensure a consistent thickness of the seamless SikaRoof systems.

**Small Medium pile roller**: Used in the application of Sika® Reemat, Sikalastic®-601 BC and Sikalastic®-621 TC to details and penetrations throughout the roof construction.

**Brushes**: For application of Sika® Reemat, Sikalastic®-601 BC and Sikalastic®-621 TC to all details and penetrations.

**Stanley knife**: This tool is required when cutting Sikalastic® Vap, Sikalastic® Insulation and Sikalastic® Carrier. When the Sikalastic® Insulation is resting on an uneven substrate, the back of the board should be cut to enable maximum contact with Sikalastic® Coldstick.

**Saw**: Used when cutting thick Sikalastic® Insulation boards.

**Sikalastic® Applicator**: A gravity fed, easy-to-use spreader for Sikalastic®-601 BC, Sikalastic®-621 TC, and Sikalastic® Coldstick.

**Airless spray equipment**: Used only for the Sikalastic®-621 TC. Airless spray-application of Sikalastic®-621 TC 9016 SR is recommended for optimum solar reflectivity.

The pump should have the following parameter:
- min. pressure: 220 bar
- min. output: 5.1 l/min
- min. nozzle: 0.83mm (0.033 inch)
Cleaning of Tools
Clean all tools and application equipment immediately after use with Thinner C. Hardened and/or cured material can only be removed mechanically.

Pot Life
Sikalastic®-621 TC is designed for fast drying. High temperatures combined with high air humidity will increase the drying process. Thus, material in opened containers should be applied immediately. In opened containers, the material will form a film within 1 or 2 hours.

Waiting Time / Overcoating
Before applying Sikalastic®-621 TC the previously applied Sikalastic coating should have been left to dry for:

Notes on Application / Limitations
Do not apply Sikalastic®-621 TC on substrates with rising moisture.

On substrates likely to exhibit outgassing apply during falling ambient and substrate temperature. If applied during rising temperatures “pin holing” may occur from rising air.

Substrate preparation is crucial to ensure highly durable quality. Precisely follow the instructions of the corresponding Primer and Cleaner PDS and the most recent issue of the Method Statement.

The surrounding area shall be protected against overspray, when Sikalastic®-621 TC is spray-applied by airless equipment.

Do not use Sikalastic®-621 TC for indoor applications.

Do not apply close to the air intake vent of a running air conditioning unit.

Areas with high movement, irregular substrates, or timber based roof decks require a complete layer of Sikalastic Carrier.

Sikalastic®-621 TC is not recommended for frequent traffic. If daily pedestrian traffic is unavoidable, Sikalastic®-621 TC shall be covered with appropriate elements such as tiles, stone plates, or wooden panels.

Do not apply cementitious products (e.g. tile mortar) directly onto Sikalastic®-621 TC.
Value Base

All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

Health and Safety Information

For information and advice on the safe handling, storage and disposal of chemical products, users shall refer to the most recent Material Safety Data Sheet containing physical, ecological, toxicological and other safety-related data.

Legal Notes

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika’s current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika’s recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product’s suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.
