REFRIGERATED TRAILERS AND CONTAINERS
FRESH IDEAS FOR COOL FREIGHT
FRESH IDEAS FOR COOL FREIGHT

Users and owners of modern trailers, refrigerated vans and containers demand lightweight and durable vehicles that insulate well and operate efficiently. Manufacturers are continually striving to develop vehicles to meet and exceed these targets and, at the same time, achieve faster build times, high rigidity and strength with optimum payload and longevity.

Sika, as a global partner to vehicle manufacturers, is able to provide bonding, assembly and sealing solutions and, importantly, the experience and know-how to assist manufacturers in achieving these targets.

04 Sandwich Panel Production

06 Body Assembly and Sealing
Trailer and container manufacturers use metal, wood, fibreglass and foam insulation in the production of side and rear walls, floors and roof structures. Increased efficiency in production is a critical factor for this competitive market place. Good thermal insulation and light-weight construction are required to provide enhanced performance and better fuel economy. The use of traditional fixing methods can result in buckling, deformation and denting of side and roof panels. Such issues require significant cost and labour to repair and rework. The use of adhesive bonding to fabricate the panels eliminates such risks and improves efficiency, quality and cost.

Sika provides solutions custom formulated to match with different customer process requirements. For example, systems are available with a wide range of press times, green strengths, open times and other key factors to adapt to the process needs of each customer’s manufacturing requirements. We offer one-, two- and three-component polyurethane (PUR) technologies (SikaForce®), as well as reactive hot-melt (RHM) technology (SikaMelt®), for such applications.

<tbody>
<tr>
<td><strong>SikaForce®-7100</strong></td>
<td>One-component PUR adhesive which foams during curing and can be easily processed</td>
</tr>
<tr>
<td><strong>SikaForce®-7710</strong></td>
<td>Two-component PUR adhesive for a wide range of sandwich panels with high strength and in a range of speeds</td>
</tr>
<tr>
<td><strong>SikaForce®-7712</strong></td>
<td>Three-component PUR adhesive with adjustable open and press times to achieve optimal productivity in varying conditions</td>
</tr>
<tr>
<td><strong>SikaForce®-7717</strong></td>
<td>Two-component PUR adhesive with the possibility for heat activation to achieve very short press times</td>
</tr>
<tr>
<td><strong>SikaMelt®-9677</strong></td>
<td>Reactive hot melt PUR adhesive for a range of panel lamination and with extremely fast cycle times</td>
</tr>
</tbody>
</table>

## Why Used Sandwich Panel Adhesive?

- Improved structural rigidity
- Lower panel weight, resulting in reduced total vehicle running costs
- Allows the use of high-performance foam cores to enhance thermal insulation
- Excellent water resistance
- Good process control, providing consistent and repeatable high-quality output
- Design flexibility

## Technological Benefits

- Bonds well to a wide variety of substrates
- Faster production due to fast strength build-up
- Compatible with manual and automatic application processes
- Custom formulation to meet customer requirements
- Full range of adhesive technologies for sandwich panel lamination, including 3C-PUR, 2C-PUR, 1-C PUR and reactive hot melt PUR systems
Recent years have seen dramatic changes in the styling and manufacturing of refrigerated trailers and containers. The mix of materials used to fabricate such equipment has also radically changed. The use of fiberglass composites and sandwich panel structures is now commonplace, as manufacturers seek to reduce vehicle weight, improve fuel economy, durability and enhance thermal insulation.

Sika can provide a range of higher performance solutions for body assembly. SikaForce® two-component PUR adhesives demonstrate high strength, good flexibility and are capable of curing at room or elevated temperatures. SikaFlex® polyurethane sealants and adhesives combine simplicity of application with excellent durability and adhesion. SikaFlex® PUR-Hybrid, silane terminated polymer (STP) technology, combines the performance of traditional SikaFlex® polyurethane systems, but demonstrates additional benefits such as reduced substrate preparation and improved worker safety. SikaFast® two-component adhesives combine low surface preparation and high tensile strength with rapid de-jigging and full cure.

---

**WHY USE ASSEMBLY ADHESIVE?**

- Higher rigidity of the structure without damage to thermal insulation – unlike mechanically fastened systems
- Lower weight, providing reduced running costs
- Excellent water resistance due to elimination of holes and drilling required by mechanical fasteners
- Improved aesthetics due to no visible fixings
- Reduced risk of warpage, as adhesives compensate for different thermal expansion rates between metal and nonmetal substrates
- Enhanced ability to withstand shock, impact and torsion

**TECHNOLOGICAL BENEFITS**

- Excellent balance of strength, flexibility and impact resistance
- Low thermal conductivity
- Excellent water resistance
- Wide range of cure speeds
- Superb adhesion to a wide range of substrates commonly used for trailer construction
- Suitable for automated or manual application
- Use of adhesives and sealants does not damage the vehicle corrosion protection layer, therefore reducing the likelihood of corrosion and repair work
GLOBAL BUT LOCAL PARTNERSHIP

WHO WE ARE
Sika India Pvt. Ltd. is a wholly owned subsidiary of Sika AG globally active specialty chemicals company. Sika supplies the building and construction industry as well as manufacturing industries (automotive, bus, truck, rail, solar and wind power plants as well as facades). Sika is a leader in processing materials used in sealing, bonding, damping, reinforcing and protecting load bearing structures. Sikas product lines feature high-quality concrete admixtures, specialty mortars, sealants and adhesives, damping and reinforcing materials, structural strengthening systems, industrial flooring as well as roofing and waterproofing systems.
